

# Configure Global Tool configuration on Jenkins

To configure Jenkins with standard configuration changes and Global tool configuration environment variables, follow below steps.

Selecting the global tool configuration, configure the `java_home` environment variable; select the 'Add JDK' option.

Add the Name to the variable and value as stated in below image. The variable value will be different depending upon the OS platform and Java version.

JDK

JDK installations

Add JDK

JDK

Name

java\_home

JAVA\_HOME

/usr/lib/jvm/java-11-openjdk-11.0.14.1-6.el8.x86\_64

☐ Install automatically ?

Delete JDK

# Configure Global Tool configuration on Jenkins

---

In GIT path variable set the value as stated below. The path variable value will be different depending upon the OS platform.

Git

---

Git installations

Git  
Name

Path to Git executable ?

☐ Install automatically ?

Delete Git

For Maven configuration, the `maven_home` variable value depends on where the Maven executable is located and the configuration and binaries.. In this example we have added the Maven folder to `/opt` folder.

Maven

---

Maven installations

Add Maven

Maven  
Name

MAVEN\_HOME

☐ Install automatically ?

Delete Maven

Add Maven

List of Maven installations on this system
